BASIC-ABSTRACT:

NOVELTY - Elastic flooring, especially a sports floor, comprises a foam provided as an elastic layer between a bottom layer, especially a plaster floor (1), and a load-distribution plate (2). The elastic layer is a closed-cell solid foam layer (3) having on its under side (6) bumps (7) producing grooves (8).

DETAILED DESCRIPTION - Preferred Features: The bumps are made in one piece with the solid foam layer. Especially flat channels (5) are arranged on the upper side (4) of the solid foam layer. The channels and the bumps have a corrugated design.

USE - Used as a sports floor.

ADVANTAGE - The flooring has a simple construction.
Moisture-induced damage to the load-distribution plate is prevented.

DESCRIPTION OF DRAWING(S) - The drawing shows a cross-section through the flooring.
